Portfolio: mohammedcsec.is-a.dev

PROFESSIONAL SUMMARY

Cybersecurity and Digital Forensics undergraduate expected to graduate in 2027, currently undertaking cybersecurity internship training at DeepSafer. Practical work and learning span web application security, vulnerability research, security-control assessment, network-traffic analysis, and defensive monitoring. Built projects involving suspicious-login detection and controlled MITM traffic simulation, and applied the NIST Cybersecurity Framework in a security-audit case study. Team leader of SABASEC at TechWiz 6 (2025), receiving jury recognition in Ethical Codebreaking. Seeking entry-level opportunities across cybersecurity analysis, SOC, application security, penetration testing, and digital forensics.

TECHNICAL SKILLS

Application Security: Web application security, API and authentication-flow analysis, vulnerability assessment, CSRF awareness, responsible disclosure.

Security Analysis: Security-control assessment, risk identification, suspicious-login detection, security monitoring concepts, SIEM and incident-response fundamentals.

Network & Forensics: Network-traffic analysis, PCAP concepts, controlled MITM simulation, Linux fundamentals, digital-forensics foundations.

Tools & Frameworks: Kali Linux, Burp Suite, Nmap, Wireshark, Splunk, YARA; NIST Cybersecurity Framework (NIST CSF), MITRE ATT&CK.

EXPERIENCE

Cybersecurity Intern | DeepSafer | Sana'a, Yemen | Present

- Undertaking supervised, hands-on cybersecurity training in a professional security-company environment, building practical exposure to security workflows, analytical methods, and technical documentation.

SELECTED PROJECTS & RESEARCH

Suspicious Login Detection System | University Exhibition

- Developed a prototype to classify successful, failed, and suspicious login attempts; flag repeated failures and unusual behavior; and display security events on a real-time dashboard.
- Added user tracking and basic response logic, including blocking suspicious users, to demonstrate defensive monitoring and threat analysis.

Botium Toys Security Audit | NIST CSF Case Study

- Assessed a fictional organization’s security controls and risk exposure, identifying gaps involving payment-card data encryption, excessive access, password policies, backups/disaster recovery, and intrusion detection.
- Recommended improvements involving encryption, least-privilege access, stronger password practices, backup planning, and security monitoring.

MITM Network-Traffic Simulation | Lab Project

- Simulated interception of email and web traffic in a controlled learning environment; examined communication flows, potential exposure points, and defensive monitoring implications.

Independent Web Vulnerability Research | HackerOne

- Investigated authentication-flow and API-configuration behavior, potential user-enumeration exposure, and controls against request abuse; submitted reports and gained practical exposure to responsible disclosure and triage.

EDUCATION

Bachelor’s Degree in Cybersecurity and Digital Forensics | Al-Nasser University | 2023–2027 (Expected)

CERTIFICATIONS & RECOGNITION

Certified Associate Penetration Tester (CAPT) - Hackviser | Nov 2025
Security Operations Center (SOC) - Cisco Learning and Certifications via Coursera | Apr 2026
Team Leader, Team SABASEC - TechWiz 6, Ethical Codebreaking | 2025 | Jury recognition
